**Research Assistant Position in Wearable Sensor Technology**

We are seeking to hire a motivated candidate with background in engineering to work on wearable sensors related projects. Our lab works on developing wearable sensing technology with applications in the areas of physiological signal monitoring, tactile sensing, gait analysis and disease diagnosis. Candidate will have the opportunity to work on these various areas of research and be involved in the design and fabrication of sensors as well as collaborating with our clinical partners on the testing and validation of these devices.

Applicant should have:

- Bachelors or Masters degree in materials science, chemical engineering, mechanical engineering, electrical engineering or biomedical engineering
- Experience in sensor technology and/or flexible electronics is preferred
- Highly motivated with ability to work independently as well as in a team
- Organized and responsible team member
- Good writing and verbal communication skills

Interested candidates should email a CV, cover letter describing research experience and interests and the names and email addresses of two references to Professor Lim Chwee Teck at the Department of Biomedical Engineering, National University of Singapore (ctlim@nus.edu.sg).
